

## O.B.T. Gehäuse

Grundsätzlich sind alle unsere Beton Einbaugehäuse "O.B.T. Gehäuse". Alle sind in Ortbeton einbaubar.

Bei Fertigteildecken ist es jedoch oft notwendig Einbautoleranzen von 15 bis 25 mm einzuplanen. Insbesondere bei Rahmenlosen Leuchten bietet es sich an, diese Zubehörteile *Verstellbar* einzubauen.

Dies macht jedoch den Einbau etwas aufwendiger und erfordert mehr Arbeitsschritte. Bislang gab es daher für Rahmenlose Leuchten nur eine Version mit Verstelltoleranzen.

Viele Kunden haben sich eine einfachere Lösung für Ortbeton gewünscht, die keine Toleranzen vorsieht. Diese bieten wir mit diesen Typen an.

Wenn Sie also eine Rahmenlose Leuchte in Ortbeton einbauen möchten, dann ist das O.B.T. Gehäuse für Sie genau das richtige. Die Bohrungen für die Befestigungen sind bereits vorgefertigt und das Zubehör einfach und schnell montiert.

## Allgemeine Produkt Updates

Viele Gehäuse wurden leicht angepasst um den Veränderungen an der zugehörigen Leuchte gerecht zu werden. So wurden Höhen, Breiten oder Längen korrigiert. Ebenso wurden unsere WDVS Gehäuse einer grundlegenden Änderung zur Absenkung der Temperaturen unterzogen. Lesen Sie hierzu "WDVS Updates"

## WDVS Updates

### **Wir senken die Temperaturen ab.**

In den letzten 6 Jahren haben die Licht-Leistungen der LED Leuchten um den Faktor 3 zugenommen.  
D.h. man erhält heute bei gleicher elektrischer Leistung drei mal mehr Licht aus einer LED Leuchte, wie noch im Jahr 2012.

Die Steigerung des Wirkungsgrades und der Lichtausbeute hat zur Folge, dass weniger Wärme entsteht.

Der Wirkungsgrad einer LED hat sich von 10% in 2012 auf ca. 25% im Jahre 2018 gesteigert. Das bedeutet, dass 15% weniger Wärme erzeugt werden. Eine EU-Richtlinie für Vorschalt- und Betriebsgeräte (LED Treiber), die seit einiger Zeit gilt, schreibt zudem vor, dass der Energie- (Wärmeverlust) der Betriebsgeräte maximal 10% der Leistung betragen darf. (Wirkungsgrad  $\geq 90\%$ ).

Diese beiden Punkte führen zu weniger Wärme in den Gehäusen.

Eine Entwicklung jedoch macht es notwendig, dass wir unsere Gehäuse um ca. 25% vergrößern um die Temperaturen weiter abzusenken. Viele Hersteller von Betriebsgeräten (TCI, Meanwell, etc.) beschränken die maximale Betriebstemperatur ( $T_a$  in Grad C°) auf der Oberfläche der Geräte auf ein Maximum von **40 - 45° C**.

Dies liegt im Wettbewerb und in der günstigeren Bauteilbeschaffung und gestiegenen Gewährleistungsansprüchen des Marktes begründet.  
Bislang waren viele unserer Gehäuse für eine Betriebstemperatur von 70° C am Kühlkörper und 50°-55° C auf dem Vorschaltgerät konzipiert.

Um die Temperaturen für die Betriebsgeräte um 15% bis 20% und damit auf **40 - 45° C** zu senken vergrößern wir bei einer Anzahl von Gehäusen das Luftvolumen um  $\geq 25\%$  und die Wärmeübertragende Außenfläche um  $\geq 10\%$ .

Gehäuse die schon zuvor diesen Kriterien genügt haben, bleiben unverändert.

Bei Fragen wenden Sie sich bitte an uns:
